Flange dimension guide

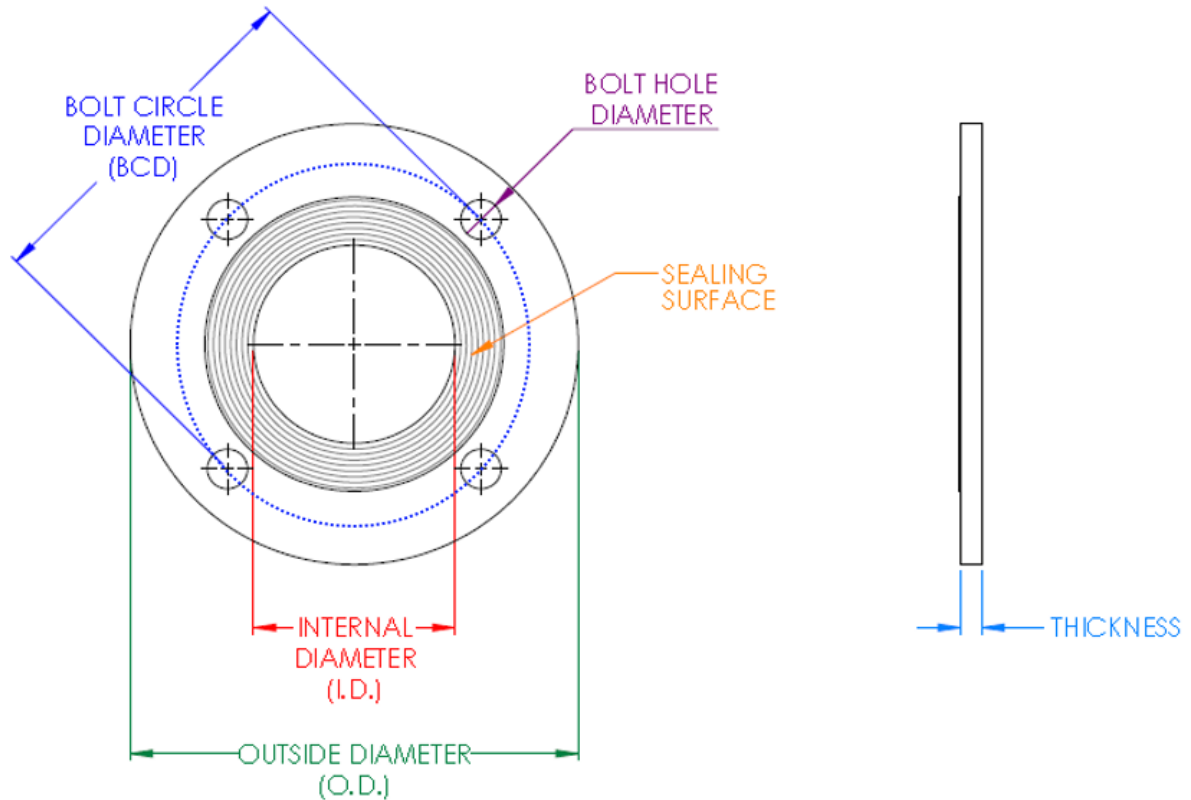

Brisbane Sydney Melbourne Darwin
VALVE AND FLOW CONTROL SPECIALISTS PTY LTD
E-mail sales@valveandflowcontrolspecialists.com

NOTES:

There maybe some rounding or conversion deviations but these should not exceed+- 1.5mm
The information in this guide should not be substitute for detailed advice or a basis for decision making,
Whilst every care has been made in this compilation of these tables no guarantee is given norliability
accepted for their accuracy. For precise data, particularly on flange thickness, refer to the relevant standard.
This flange information does not necessarily apply to valves and other pipeline equipment which are often
designed to accommodate multiple flange standards. Consult the relevant Manufacturers data for their
relevant products.

How to Measure Flanges & Gaskets

The measuring principles apply to both flanges and gaskets.

*Above is a drawing of a Flange.

The **Bolt Circle** is the measurement (diameter) of an imaginary circle passing through the centers of all the bolts in a round pattern. This is represented by the **Blue Dashed Circle** in the drawing. To measure such circle measure from the center of one bolt directly across to the center of the other bolt.

The **Outside Diameter** is the measurement of the outside of the Flange or Gasket.

The **Inside Diameter** is the measurement of the inside of the hole of a Flange or Gasket.

The **Sealing Surface** is the area of contact the gasket is placed to seal between two flange connections.

All measurements should be made across the center of the flange or gasket.

Flange dimensions

Nominal size: 15mm

	Class / Table	Outside Diameter	Pitch Circle Diameter	No. Holes	Hole Diameter	Bolt Diameter	Minimum Flange Thickness			
							Cast Iron	Ductile Iron	Copper Alloy	Steel
