

Sampling Cooler

DKSPC Series

- For boiler water, steam, or condensate sampling
- Stainless steel body and coil tube to minimize corrosion
- Counter current flow for efficient cooling

DKSPC Series Sampling Cooler

Features

- Single or double spiral coil tube
- All stainless steel materials
- Metal O-Ring endured high temperature sampling
- Cooling inlet and outlet connections are available

Operation

It is important that there must be flowing before opening the inlet of sample valve. The below condition shall be followed for safe operation and accurate sampling.

- 1) Open the inlet valve of coolant and check whether it comes out through the outlet or not.
- 2) To get the coolant sample, the flow rate should be adjusted while the inlet valve is being opened slowly. Generally, 25°C should be perfect.
- 3) The coolant should be flowed for a while before you receive the sample on the container. By doing this you can get the exact sample for the analysis.
- 4) When you have enough sample firstly close the inlet valve and then, close the inlet valve of coolant.
- 5) After close the inlet sample valve, the coolant will be possible to drop of connector while the sample in the coil is being drained.

Material of Construction

Component	Materials
1. Outer Pipe	Stainless Steel 304
2. Inner Pipe	Stainless Steel 304
3. Single / Double Coil Tube	ASTM A213 / A269 TP316
4. Metal O-Ring	Stainless Steel 316L
5. Upper Flange	Stainless Steel 304
6. Lower Flange	Stainless Steel 304
7. Bottom Plate	Stainless Steel 304
8. Hex. Head Bolt	Stainless Steel

Maintenance and Spare Part Ordering

Maintenance – Disassembly and Reassembly

1. Remove the hex. head bolts at upper flange. (required spanner size 3/8") and separate the upper flange and lower flange.
2. Remove the old metal o-ring and clean the each part by appropriate cleaning solution.
3. Replace the new metal o-ring and tighten the hex. head bolts.
4. Tighten torque are about 48 N·m for DKSPC-TS4T/DKSPC-TD4T (Tube O.D 1/4") and 61 N·m for DKSPC-TS-6T/DKSPC-TD6T(Tube O.D 3/8").
5. After reassembly, shell test shall be performed at new metal o-ring showing visible leak.

Factory Test and Packaging

Every Sampling Cooler is factory tested with nitrogen gas at working pressure for cylinder.
