Pneumatic Accessories – Overview

Help keep equipment operating effectively

These items are used on pneumatic airlines or on valve solenoid valves where venting or exhausting silencing and or controlling is required.

Brass Bug Vent Protector Silencer (BBV-08)

The vent protector is an inexpensive part which serves two functions firstly to stop bug nesting or minimizing the ingress of dust etc from the site environment while secondly operating as a small silencer quietening the exhaust sounds of the solenoid valve.

Stainless Bug Vent Protector Silencer (SBS-08)

The stainless vent protector is used in tropical, marine or washdown areas where brass is not suitable.

Brass Conical Bug Vent Protector Silencer (BCS-08)

The conical Bug protector / Silencer operates the same as the compact BBV-08 but with its larger surface area diffusers the exhaust gas noises quieter.

Stainless Conical Bug Vent Protector Silencer (SCS-08)

The stainless conical Bug protector / Silencer is used in tropical, marine or washdown areas where brass is not suitable.

Brass Regulator Exhaust Vent Silencer Protector (BSC-08)

These units vent, protect and silence which also allows regulation of the air exhaust controlling the actuator operating speed (AKA as speed controllers).

Stainless Regulator only function (SSC-08)

These stainless units offer right angle regulation of air lines where the traditional brass units are not suitable.

Also remember VCS offer the 3 way 2 position Namur solenoid valves for spring return actuators without the need for the additional cost of adaptor plates thus reducing additional potential leak paths.
